'Promoting Resilience During The Transition To Adolescence

December 27, 2019
This chapter explores resilience during the transition to adolescence in chronically ill children and their families from the perspective of pediatric psychology. It aims to identify resilience factors and how medical practitioners can target these factors as a way to promote an optimal response to pediatric chronic illness during the transition to adolescence.

Families of chronically ill children: systems and social

March 6th, 1988
Families of Chronically Ill Children: A Systems and Social-Ecological Interventions that incorporate these homeostatic patterns may be more effective than those that focus on the individual and emphasis has been placed on the family with the exclusion of the child. Early literature concerned itself with advising parents on how to play a role in the care of their child.

'Playful intervention with chronically ill children

August 12th, 2013
This study explored the knowledge of families being generally insufficient to develop adequate home care for chronically ill children according to the authors. The information obtained by families in a subtle manner is difficult to grasp due to overly technical content.
