
LT3477 Datasheet and Product Info Analog Devices
December 24th, 2019 The LT3477 is a current mode 3A DC DC step up converter with dual rail to rail current sense amplifiers and an internal 3A 42V switch It bines a traditional voltage feedback loop and two unique current feedback loops to operate as a constant current constant voltage source Both current sense voltages are set at 100mV and can be adjusted ind

FINE FOR THE COLD BUT WHAT IS A GOOD, ‘AVR microcontrollers
November 7th, 2019 In 2006 Atmel released microcontrollers based on the 32 bit AVR32 architecture This was a plately different architecture unrelated to the 8 bit AVR intended to pete with the ARM based processors new alternative to the arduino-frontend december 6th but your solution is coupled to the arduino framework maybe it is possible to use it in another way directly for the avr gcc really nice in case the built in drivers in the first solution 2 years ago there was a handmade configuration script for the timer timer initialization but this is not convenient to edit’
